Let's Test 2019
Wander With A Purpose

Network
- Start the application from different IP locations using VPN vs. WiFi to see what the default map is

Browser
- Talk to a product owner/developer to see what's expected of the browser back button
- Look at the website's certificate to see if it's valid
- Make sure that the website SSL looks locked from different browsers
- Download the SSL certificate and see what kind of encryption — Talk to a security expert at our company to see if that encryption is strong enough

Accessibility
- Use the tab and arrow keys to see if someone with carpal tunnel syndrome can navigate around the map

Mobile
- Use an emulator to mimic different devices and see how the landing page is rendered

Large-scale maps
- Zoom out all the way to see what the user experience is of going around in both directions
- Zoom out all the way what is in the empty space around the map

Point-to-point directions
- Select two destinations on different continents to see if there are any public transport methods
- Select two destinations on different continents to see what transport options are recommended
- Compare train times to Google Maps for a particular destination to see if they're the same

Location services
- Try turning the location on and off to see how the green donut/zooming functionality is affected

Street view
- Talk to a business/product owner to out if there's supposed to be a street view

Menu options
- Try reporting feedback to see if there's a minimum character count required
- Look at different devices to see if all the menu options are there
- Look at different devices to see if all the menu options are in the same place

Sitemap
- Check out the sitemap to see if the sample locations are still useful.
